

SVELTE • TEMPLATE SYNTAX

# {#key ...}

```
{#key expression}...{/key}
```

Key blocks destroy and recreate their contents when the value of an expression changes. When used around components, this will cause them to be reinstantiated and reinitialised:

```
{#key value}  
  <Component />  
{/key}
```

It's also useful if you want a transition to play whenever a value changes:

```
{#key value}  
  <div transition:fade>{value}</div>  
{/key}
```
