

Runtime errors

ON THIS PAGE

Client errors

bind_invalid_checkbox_value

Using ``bind:value`` together with a checkbox input is not allowed. Use ``bind:checked`` instead.

bind_invalid_export

Component `%component%` has an export named ``%key%`` that a consumer component is trying to bind to.

bind_not_bindable

A component is attempting to bind to a non-bindable property ``%key%`` belonging to `%component%`.

component_api_changed

`%parent%` called ``%method%`` on an instance of `%component%`, which is no longer valid in Svelte.

component_api_invalid_new

derived_references_self

A derived value cannot reference itself recursively

each_key_duplicate

Keyed each block has duplicate key at indexes %a% and %b%

Keyed each block has duplicate key `%value%` at indexes %a% and %b%

effect_in_teardown

`%rune%` cannot be used inside an effect cleanup function

effect_in_unowned_derived

Effect cannot be created inside a `\$derived` value that was not itself created inside an effect

effect_orphan

`%rune%` can only be used inside an effect (e.g. during component initialisation)

effect_update_depth_exceeded

Maximum update depth exceeded. This can happen when a reactive block or effect repeatedly updates itself.

Failed to hydrate the application

invalid_snippet

Could not `{@render}` snippet due to the expression being `null` or `undefined`. Consider

lifecycle_legacy_only

`%name%(...)` cannot be used in runes mode

props_invalid_value

Cannot do `bind:%key%={undefined}` when `%key%` has a fallback value

props_rest_readonly

Rest element properties of `\${props()}` such as `%property%` are readonly

rune_outside_svelte

The `%rune%` rune is only available inside `.svelte` and `.svelte.js/ts` files

state_descriptors_fixed

Property descriptors defined on `\${state}` objects must contain `value` and always be `enum

state_unsafe_local_read

Reading state that was created inside the same derived is forbidden. Consider using ``untrack``

state_unsafe_mutation

Updating state inside a derived or a template expression is forbidden. If the value should be updated, consider using ``derived`` or ``update``

Server errors

lifecycle_function_unavailable

``%name%(...)`` is not available on the server

Shared errors

invalid_default_snippet

Cannot use ``{@render children(...)}`` if the parent component uses ``let:`` directives. Consider using ``<div>{children}</div>``

lifecycle_outside_component

``%name%(...)`` can only be used during component initialisation

svelte_element_invalid_this_value

The ``this`` prop on `<svelte:element>` must be a string, if defined
