

SVELTE • LEGACY APIS

<svelte:component>

In runes mode, `<MyComponent>` will re-render if the value of `MyComponent` changes.

In legacy mode, it won't — we must use `<svelte:component>`, which destroys and recreates the component instance when the value of its `this` expression changes:

```
<svelte:component this={MyComponent} />
```

If `this` is falsy, no component is rendered.
