

# \$app/paths

## ON THIS PAGE

```
import { assets, base, resolveRoute } from '$app/paths';
```

## assets

An absolute path that matches config.kit.paths.assets .

If a value for `config.kit.paths.assets` is specified, it will be replaced with `'/_svelte_kit_assets'` during `vite dev` or `vite preview` , since the assets don't yet live at their eventual URL.

```
let assets:  
  | ''  
  | `https://${string}`  
  | `http://${string}`  
  | `/_svelte_kit_assets`;
```

## base

A string that matches config.kit.paths.base .

Example usage: `<a href="{base}/your-page">Link</a>`

```
let base: '' | `/${string}`;
```

Populate a route ID with params to resolve a pathname.

```
import { resolveRoute } from '$app/paths';

resolveRoute(
  `/blog/[slug]/[...somethingElse]`,
  {
    slug: 'hello-world',
    somethingElse: 'something/else'
  }
); // `/blog/hello-world/something/else`
```

```
function resolveRoute(
  id: string,
  params: Record<string, string | undefined>
): string;
```
