

sv create

ON THIS PAGE

sv create sets up a new SvelteKit project, with options to setup additional functionality.

Usage

```
npx sv create [options] [path]
```

Options

--template <name>

Which project template to use:

- minimal — barebones scaffolding for your new app
- demo — showcase app with a word guessing game that works without JavaScript
- library — template for a Svelte library, set up with svelte-package

--types <option>

Whether and how to add typechecking to the project:

- ts — default to .ts files and use lang="ts" for .svelte components

--- ~~~~~

Prevent typechecking from being added. Not recommended!

`--no-add-ons`

Run the command without the interactive add-ons prompt

`--no-install`

Skip dependency installation
