SVELTEKIT • REFERENCE

$lib

SvelteKit automatically makes files under `src/lib` available using the `$lib` import alias. You can change which directory this alias points to in your <u>config file</u>.

src/lib/Component.svelte

```
A reusable component
```

src/routes/+page.svelte

```svelte
<script>
  import Component from '$lib/Component.svelte';
</script>

<Component />
```
